

ARTHUR MARQUES AZEVEDO

FULL-STACK DEVELOPER · AI & LLM ENGINEER · BLOCKCHAIN

Ilhéus-BA, Brazil (open to relocation) · +55 73 99148-1220 · arthurmarquesazevedo@gmail.com · github.com/Arthur1220 · linkedin.com/in/azevedo-arthur

PROFESSIONAL SUMMARY

Computer Science graduate and Full-Stack Developer and AI Engineer with experience in tech startups, working across microservice architecture, direct LLM API integrations, and deployment of conversational systems in production. Proven track record in Back-end (Python, Django, Node.js), Front-end (Vue.js), and Blockchain (Solidity, Hardhat), with a solid foundation in DevOps, RESTful APIs, and both relational and non-relational databases. Impact-driven profile: identifying architectural bottlenecks, proposing solutions, and delivering measurable results in high-responsibility, lean-team environments. Proficient in AI tooling and Prompt Engineering for code optimization, test automation, and technical documentation.

TECHNICAL SKILLS

Languages: Python, Go, JavaScript, TypeScript, Solidity, SQL, C/C++, R

Frameworks: Django, FastAPI, Vue.js, Node.js, Express, Hardhat

Cloud & DevOps: Docker, GitHub Actions, Linux (bash), AWS, Supabase

Databases: PostgreSQL, MySQL, SQLite, MongoDB, ORMs (Prisma, SQLAlchemy, GORM)

Blockchain: Solidity, Hardhat, OpenZeppelin — L1/L2 Ethereum (Polygon)

AI & LLM: Prompt Engineering, direct LLM API integration (OpenAI, Gemini, Claude), custom automations without abstraction frameworks

Integrations: WhatsApp Business API (official & unofficial), Instagram API, CRM

Tools: Git, Postman, VS Code, Agile/Scrum

PROFESSIONAL EXPERIENCE

Full-Stack Developer · Mar 2026 – Present

Datafly Brasil · Lexa IA · Remote

Stack: NestJS, Next.js, Node.js, JavaScript, TypeScript, Prisma, Supabase, WhatsApp Business API (official/unofficial), FastAPI, Vue.js, JWT, Docker, LLMs, Microservice Architecture

- Proposed and architected from scratch the AI module of the platform (lexa-ai) as an independent microservice, after identifying that the code coupled to the CRM was inefficient and hard to maintain — delivering an isolated, reusable, and high-performance service.
- Significantly reduced AI response time by refactoring the legacy module and redesigning the message processing architecture into a scalable, efficient solution.
- Builds and maintains modules across the Lexa IA CRM, actively contributing to new features, integrations, and adjustments with full-stack coverage — back-end and front-end.

AI & LLM Workflow Engineer · Jan 2026 – Feb 2026

Dr. IA · Belo Horizonte, MG · Remote

Stack: LLMs, Prompt Engineering, Conversational AI Platforms, WhatsApp Business API, CRM

- Managed an active portfolio of simultaneous clients (physicians and clinics), leading the full onboarding cycle — from first contact to AI agent activation in production.
- Achieved the fastest activation time on the team since joining the company, in a process that historically took months.
- Won an internal client reactivation campaign, outperforming the entire team — awarded with paid time off.
- Identified a gap in the onboarding experience and independently created support materials — visual presentation, standardized messages, and a step-by-step notification flow — reducing friction and client drop-off throughout the process.

- Documented the area's processes from scratch in internal documents — from first contact to AI configuration — adopted by management and still in use after departure.

PROJECTS

Freelance · Full-Stack Web System · Jan 2025 – Mar 2025

Nutritional Requirements Calculator — BRCO · Remote

Stack: Node.js, Express.js, Prisma, Vue.js, Pinia, Docker, AWS Lightsail, Netlify

- Designed and architected a free-access web platform for sheep/goat nutritional requirement calculations (BRCO), democratizing a tool previously limited to academic use; secure RESTful API with Node.js/Express + Prisma ORM, CSV export, and containerized deployment on AWS Lightsail.

Freelance · Full-Stack Web System · Jun 2024 – Aug 2024

Nutritional Calculator v1 · Remote

Stack: Django, Vue.js, JWT, Pytest, Docker, AWS EC2

- Built v1 of the platform (Django/Vue.js) with JWT authentication, automated test suite (Pytest), PDF report generation, Docker Compose containerization, and deployment on AWS EC2.

Technological Research Initiation · Aug 2023 – Aug 2024

UESC — 3D Image-Based Weight Estimation in Sheep Farming · Ilhéus, BA

Stack: Python, Intel RealSense, SQLAlchemy

- Python system for 3D image capture and metadata storage, automating data collection to enable future weight regression models in sheep farming. Presented at the 30th Scientific Initiation Seminar.

Technological Research Initiation · Aug 2022 – Aug 2023

UESC — Diet Calculator for Goats and Sheep · Ilhéus, BA

Stack: Python, Tkinter, NumPy

- Desktop application (OOP + NumPy) to automate national nutritional formulas for goats/sheep, accelerating diet formulation for researchers. Presented at the 29th Scientific Initiation Seminar.

EDUCATION

B.Sc. Computer Science · 2020 – Jul 2025

Universidade Estadual de Santa Cruz (UESC) · Ilhéus, BA

GPA: 8.3/10

Thesis Project: Architecture and development of a full-stack platform for immutable agribusiness traceability, using a hybrid on-chain/off-chain architecture (Polygon L2 + PostgreSQL). Back-end custodial wallet solution abstracting 100% of Web3 complexity from the end user. Pytest test suite with +95% coverage on smart contracts and atomic transactions for on/off-chain data consistency. (Django, Vue.js, Solidity, Hardhat, Docker, Pytest).

CERTIFICATIONS & COURSES

- EF SET English Test — 60/100 (B2 Upper Intermediate) · 09/2025
- Crash Course on Python (Google)
- Mini-course “Talking with LLMs” — SINFORM 2024
- Mini-course “Power BI” — SINFORM 2024
- MongoDB Complete Guide (Udemy) — 2025
- Agile & Scrum Mastery (Udemy) — 2025
- Go Language Formation (Alura) — 2025
