ARTHUR MARQUES AZEVEDO

SOFTWARE ENGINEER | BACK-END & CLOUD (AWS) | AI & LLM

São Paulo, Brazil | +55 73 99148-1220 | arthurmarquesazevedo@gmail.com | github.com/Arthur1220 | linkedin.com/in/azevedo-arthur

PROFESSIONAL SUMMARY

Software Engineer focused on backend, with experience building APIs, microservice architectures and distributed systems, currently at Itaú BBA building AWS solutions for corporate banking businesses, with a focus on secure integrations and credential management. Hands-on experience with EVM blockchains: architected an on-chain traceability platform on Polygon (L2) with Solidity smart contracts, a back-end custodial wallet that abstracts gas and key management, and consistency between on-chain and off-chain data. Strong grounding in API security, authentication and access control, containerization and CI/CD.

TECHNICAL SKILLS

Backend: Node.js, TypeScript, NestJS, Express, Go, Python (Django, FastAPI); RESTful APIs, microservices

Blockchain / Web3: Solidity, Hardhat, OpenZeppelin, Polygon (L2) and EVM networks; backend ↔ smart contract integration, custodial wallet, gas and key management

Databases: PostgreSQL (schema design, queries, atomic transactions), MySQL, DynamoDB, MongoDB, Supabase; ORMs (Prisma, GORM, SQLAlchemy)

Security & Access: JWT authentication, authorization and access policies (IAM), credential and secrets management, secure development (OWASP)

Testing: Pytest, smart contract testing with Hardhat, API testing (Postman)

Infra & DevOps: Docker, Docker Compose, GitHub Actions (CI/CD), Linux (bash), Git, environment configuration

Cloud & Observability: AWS (Lambda, ECS, S3, API Gateway, DynamoDB, IAM, CloudWatch, EC2, Lightsail), Datadog

AI & LLM: Direct LLM API integration (OpenAI, Gemini, Claude), Prompt Engineering

Methods: Agile/Scrum, technical refinement, API contract definition, user story writing

PROFESSIONAL EXPERIENCE

Junior Software Engineer | Itaú BBA

Jul 2026 – Present | São Paulo, Brazil (hybrid)

Stack: AWS (Lambda, ECS, S3, API Gateway, DynamoDB, IAM, CloudWatch), Datadog, REST APIs

- Develops backend services and APIs in a cloud-native AWS environment (Lambda, ECS, API Gateway) for corporate banking businesses, in a regulated, high-criticality context.
- Implements integrations between the bank's internal APIs and external services, with secure management of credentials, secrets and access policies (IAM).
- Takes part in refinement, planning and architecture decisions, defining requirements and technical contracts with product and partner teams.
- Monitors and supports production applications with Datadog and CloudWatch, identifying and resolving incidents.

Full-Stack Developer (Backend focus) | Datafly Brasil / Lexa IA

Mar 2026 – Jul 2026 | Remote

Stack: NestJS, Node.js, TypeScript, Express, Prisma, Supabase (PostgreSQL), JWT, FastAPI, Docker, WhatsApp Business API, LLMs

- Architected and implemented the platform's AI module (lexa-ai) as an independent microservice, defining API contracts with the other CRM services.
- Significantly reduced AI response time by redesigning the message processing architecture into an isolated, scalable, high-performance solution.
- Built CRM APIs and modules in NestJS/TypeScript with Prisma and PostgreSQL (Supabase), including JWT authentication and WhatsApp Business API integrations.
- Collaborated with the front-end team (Next.js/Vue.js) on API contracts and planning of new features.

AI & LLM Workflow Engineer | Dr. IA

Jan 2026 – Feb 2026 | Remote

- Led onboarding of multiple concurrent clients through AI agent activation in production, achieving the team's fastest activation time and winning an internal campaign.

Freelance Backend / Full-Stack Developer | BRCO Nutrition Calculator
Jan 2025 – Mar 2025 | Remote
Stack: Node.js, Express, Prisma, Vue.js, Docker, AWS Lightsail, Netlify

- Designed and built a RESTful API in Node.js/Express with Prisma, including database modeling and CSV report export; containerized deployment (Docker) on AWS.

Freelance Backend / Full-Stack Developer | Nutrition Calculator v1
Jun 2024 – Aug 2024 | Remote
Stack: Django, Vue.js, JWT, Pytest, Docker Compose, AWS EC2

- Developed an API with JWT authentication, full CRUD, automated tests (Pytest) and PDF reports; containerized stack deployed on AWS EC2.

FEATURED PROJECT — BLOCKCHAIN

Animal Traceability System with Blockchain (Thesis)
Mar 2025 – Jul 2025
Stack: Solidity, Hardhat, OpenZeppelin, Polygon (L2), Django, PostgreSQL, Vue.js, Docker, Pytest

- Architected a hybrid on-chain/off-chain platform against fraud in agribusiness: hashes of critical events (vaccination, transport) recorded on Polygon, with detailed data in PostgreSQL.
- Integrated the backend with smart contracts through a custodial wallet that abstracts 100% of Web3 complexity (private key management and gas fees) from end users.
- Ensured consistency between blockchain and relational database with atomic transactions (@transaction.atomic) and an automated test suite for the smart contracts.

EDUCATION

B.Sc. in Computer Science | Universidade Estadual de Santa Cruz (UESC) | 2020 – Jul 2025 | GPA 8.3/10. Two Python technological initiation research projects presented at the 29th and 30th Scientific Initiation Seminars.

CERTIFICATIONS & COURSES

- Go Language Program (Alura), 2025
- Itaú internal learning paths: API Practitioner, Solution Architecture, Secure Development (OWASP) and Information Security
- AWS Certified AI Practitioner — in progress
- EF SET English Test — 60/100 (B2 Upper Intermediate), 09/2025
- MongoDB Complete Guide (Udemy), 2025 · Agile & Scrum Mastery (Udemy), 2025 · Crash Course on Python (Google)

SOFT SKILLS

Communication | Cross-team collaboration | Problem-solving | Security mindset | Self-learning | Initiative
